EDUCATION

Fairleigh Dickinson University – Vancouver, BC, Canada

September 2022 – May 2024

Master of Science in Applied Computer Science, Advanced Computer Programming Specialization

GPA 3.77 / 4.00

Monterrey Institute of Technology and Higher Education – Mexico City, Mexico

August 2016 - June 2021

Bachelor of Science – BS, Computer Science and Engineering

GPA 86 / 100

WORK EXPERIENCE

Sandman Media

September 2023 – December 2023

Full-Stack Developer.

- The company focused on the creation of web pages for clients. My internship primarily revolved around web development and maintenance using **PHP** within a Joomla-based environment. I utilized **MVC** models to create modules for Joomla and employed **MySQL** for data management across all pages.
- My daily tasks involved correcting bugs and adding features to both the frontend and backend of various sites. Additionally, I facilitated the training of new developers during my final month at the company. Worked in cloud server.
- I independently developed a functional full-stack system that enabled users within the same building to reserve and give away parking spots. This involved creating an MVC-based **PHP** module capable of managing the parking spot reservation system and providing access to information on present, past, and future spots. I incorporated CRON jobs for automated systems within the project and prepared all necessary documentation, including diagrams, for future development. This work was implemented on a cloud server. This website is live at: <https://parking.exchange/>

Oracle

January 2022 – August 2022

Software Developer.

- Worked in conjunction with the rest of the big data team to follow on current projects that needed attention. Biweekly checks to ensure feedback within the team.
- Worked on publicly released **java-based projects** that dealt with databases both **SQL** and **non-SQL**. My work linked with extraction and repurpose of data. Gained knowledge on work environments with **git**.
- Fixed bugs such as detecting erroneous data and sending basic alerts as well as added new features to existing projects that could be critical for the development of the project moving forward. Features could be repurposed for other similar projects. These new features included retrieving specific data from the databases as well as the metadata.

MAJOR PROJECTS

Transacto – Small business organization system

March 2025 – June 2025

Independent Full stack development of web-based project. [Github Repo](#)

- Built with **Angular (frontend)**, **Node.js/Express (backend)**, and **MySQL (database)** — deployed on a single **Ubuntu EC2 AWS instance**.
- Independently designed and developed a full-stack web application to help small retailers manage daily operations in one centralized system.
- Enables user registration, secure login, transaction recording, and custom date-based report generation via a clean and responsive UI.
- Currently in use by a small retailer in Mexico for internal testing and operations tracking. Continuously maintaining and expanding the platform with new features based on feedback and real-world testing.
- Running in the following page <https://transactoapp.xyz/>.

UVAMATE Game

August 2020 – December 2020

Worked on the completion of a game for kids with ADHD.

- Followed guide on development of games specifically for kids with ADHD provided by the client. The game is intended to be used for educational purposes in middle schools.
- Developed in Unity using **C#**. Two sections of the game were fully created as well as a database with **MongoDB** that allowed for registration of the user and saved states. The sections can be repurposed and used for completion of the project.

Monterrey Institute of technology and higher Education

January 2020 – August 2020

Created a website for institutional program “Patrones Hermosos”

- Developed web page using **Angular** and **NodeJS**. Use of **REST API** for calls.
- Use of multiple databases within the web project: **MongoDB**, **MySQL** and a backup with **PostgreSQL**.
- Weekly meetings with the client to ensure the project was up to standard. Final web page, and SQL databases mounted in **Azure**.

SKILLS

Programming languages

4 years: Java 3 years: C++
2 years: CSS, HTML, TypeScript,
JavaScript, C
1 year: PHP, Python, C#

Environments and frameworks

Angular, NodeJS, ExpressJS, Spring,
React, .Net., Android Studio.

Databases

2 years: MySQL
1 year: MariaDB, PostgreSQL, MongoDB, MS-SQL

Other Skills

REST, Linux, Azure, AWS.

Languages

English, Spanish
